Chad Koslovsky

Infrastructure that stays dependable through change

Milliken, Colorado · chad@koslovsky.xyz

Senior Infrastructure Engineer | Salas O'Brien

Tailored portfolio: https://salasobrien.koslovsky.xyz

01 PROFILE

I modernize infrastructure while keeping the people using it working. My background spans IBM enterprise systems, FRII NOC leadership and hands-on client ownership through Technomancy IT. I combine Windows and cloud administration, practical automation and incident investigation with the documentation and follow-through that make a change supportable.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Own client systems from discovery and implementation through production support. Set up Microsoft environments, administer client infrastructure and implement identity integrations including Microsoft Entra ID and AWS IAM.

Build access-controlled integrations and operational tooling across client applications and services. Bring more than five years of Azure client work, alongside extensive AWS delivery, and remain the person clients call when systems need attention.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Led the NOC, engineering escalations, monitoring and recovery verification for hosted infrastructure. After years with FRII, took sole systems-engineering responsibility for about a year through its ownership transition, with NOC first-line coverage continuing.

Built tooling for operators and hosting/colocation customers, migrated Hyper-V and VMware ESXi workloads to Docker and Kubernetes, and performed smaller server/firewall upgrades. Ran SOC 1 and SOC 2 audits and translated controls into usable procedures and evidence.

Systems / Software Engineer · Office Evolution | 2014-2015

Built centralized applications linking CRM, provisioning, onboarding and service operations across locations. Turned cross-department handoffs into explicit workflows and supported architecture across client environments.

Worked with the CEO and CIO to connect operational needs with technical implementation, making shared services easier for teams to use and support.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported business networks, systems and endpoints across MSP client environments, including remote monitoring, antivirus services and on-call troubleshooting.

Built diagnostic/support tooling around recurring issues and communicated directly with owners and end users, connecting technical fixes to the work the business needed to resume.

Infrastructure and Systems Focal · IBM | 2010-2012

Served as infrastructure focal for shared enterprise environments, managing virtualization test labs and hosted desktops while coordinating changes, incidents and escalations across teams.

Automated audit, backup and compliance workflows and worked across application, infrastructure, vendor and business stakeholders on shared-service operations.

03 SELECTED WORK

Legacy infrastructure modernization · Excell Services LLC · Technomancy client engagement

Rebuilt legacy servers and employee computers, upgraded networking and implemented Windows Server, Active Directory and VPN connectivity for corporate users and a satellite location. Took responsibility for the working environment, not just the replacement hardware.

Operational tooling and workload modernization · Front Range Internet Inc. | 2015–2020

Built tooling for the operators and hosting/colocation customers working with FRII's infrastructure, alongside extensive Docker work and operational system connections. Paired workload modernization with recovery verification and auditor-readable SOPs, so delivery included how the system would be operated and checked.

Connected service provisioning · Office Evolution | 2014–2015

Connected CRM, provisioning and onboarding through centralized applications rather than leaving each department to bridge the gaps. The work joined service operations across locations and turned cross-team handoffs into explicit shared workflows.

04 CAPABILITIES

Windows Server, Active Directory, Microsoft 365 and Microsoft Entra ID · Azure client environments (5+ years); extensive AWS delivery and IAM · PowerShell, Bash, TypeScript, APIs and practical Python scripting · VMware ESXi, Hyper-V, Docker and Kubernetes; monitoring and recovery · NOC leadership, engineering escalations, operational procedures and SOC 1/2 audit ownership
